

Планирование адресного пространства

LAN1
192.168.10.0/24

LAN2
192.168.20.0/24

LAN3
10.10.10.0/30

LAN1 и LAN2 содержат несколько устройств.
Поэтому удобно использовать /24 или 255.255.255.0

В LAN3 находятся всего два маршрутизатора.
Поэтому использовать целую сеть /24 бессмысленно. Она рассчитана ровно на два устройства.

В консоли R1 вводим

```
enable  
configure terminal
```

```
interface FastEthernet0/0  
ip address 192.168.10.1 255.255.255.0  
no shutdown  
exit
```

```
interface FastEthernet1/0  
ip address 10.10.10.1 255.255.255.252  
no shutdown  
exit
```

```
interface FastEthernet2/0
ip address 192.168.20.1 255.255.255.0
no shutdown
exit
```

end

show ip interface brief

В консоли R2 вводим

```
enable
configure terminal
```

```
interface FastEthernet0/0
ip address 10.10.10.2 255.255.255.252
no shutdown
exit
```

end

Проверяем на R1

ping 10.10.10.2

```

Настройка DHCP-сервера на R2

В консоли R2 вводим

```
enable
configure terminal
```

```
ip dhcp excluded-address 192.168.10.1
ip dhcp excluded-address 192.168.20.1

```

Интерфейс LAN2

```
interface FastEthernet2/0  
  
ip helper-address 10.10.10.2  
  
exit  
  
end
```

Настройка статической маршрутизации

Открываем консоль R2

```
enable

Клиент, не имеющий IP-адреса, отправляет широковещательный запрос DHCP Discover с целью поиска DHCP-сервера в сети. Пакет отправляется на широковещательный адрес, так как клиент еще не знает адрес сервера. DHCP-сервер получает запрос и отправляет сообщение DHCP Offer, в котором предлагает клиенту свободный IP-адрес, маску подсети, адрес шлюза по умолчанию и другие параметры сети. Получив предложение, клиент отправляет сообщение DHCP Request, подтверждая, что согласен использовать предложенный IP-адрес и запрашивает его выделение. DHCP-сервер отправляет сообщение DHCP ACK, подтверждая выделение IP-адреса клиенту. После получения этого сообщения клиент завершает настройку сетевого интерфейса и может начать работу в сети.
